

**Between You, Me and the Mastercam Post:**  
*An informative look at the post department at In-House Solutions*

**POST BUSINESS AS USUAL:**

This letter will be something new from In-House Solutions to try to keep everyone aware of what is happening here at the House that House built, as it relates to your business and areas that we may be of service to you. Our prime directive here on the post side of the business is to increase the number of opportunities you can go after with Mastercam by supplying edit free post processors for whatever your application may be. This newsletter will be sent out approximately every other month to keep everyone as up to date as possible. If you have requests as to other items you would like to see in this newsletter (Example: Steve Bertrand doing his best Don Cherry impression) let us know it would be great to hear from you. We thank you for your continued business and look forward to pushing the Mastercam envelope even further as partners working together towards a common goal.

You should be aware at this time that our post group has gone through some changes but, the guts are still here working away just as hard as they ever have. At In-House we embrace change and talk about how we can make our departments better. That being said we would like to introduce the growing post group to everyone, please see pictures and brief descriptions below. Click on individual's picture if you wish to email them directly.

**BELIEVE IT**

Mills, Lathes, Routers and Wire EDM's are not the only machines that we have successfully posted code to out of Mastercam. When the minds meet here at In-House Solutions, we've come up with solutions for many other types of CNC and even non-CNC based equipment such as waterjets, lasers, plasmas, torches, bending machines (tube and sheet metal) shot peening, probing macros etc. Give us a call and we would be happy to discuss any application you may have.

**WHAT'S HOT**

As expected the most popular style machine we're receiving requests for right now is a 5-axis setup. These requests come in many different machine types, everything from a standard 5-axis Haas VF9 (Watch out for the advanced 5-axis comp for tapping cycles) to the oh so popular Heidenhain style control with tilted work plane support. These styles of posts are our bread and butter, even if it is an oddball machine or setup, don't be afraid to give us a shout, chances are we've already done something similar and would be happy to assist you in finalizing your Mastercam sale. Beyond the Mill side of things we're seeing more and more requests for multiple code streams for upper and lower turret lathes as well.

**WHAT'S ODD**

Well beyond wearing a Speedo for casual Fridays, other odd projects that we've seen come in lately would include things such as: 5-6 axis laser cutting, CNC tube bending projects, 5-axis machines with bolt on aggregates, also with Robotmaster 6-8 axis robot configs. We're willing to discuss any application you feel Mastercams toolpaths should be able to link up to via a post processor.

**PARTNERS**

We have many ideas at In-House Solutions Inc. on how we can make things better in the future. Please feel free to email the post department with any idea's you may have. Our goal is to supply you with the best post and keep the Mastercam name number 1 in the industry.

**In-House Solutions Post Processor Developers**

*Click an individuals picture to e-mail directly*

**Allan Brown**

12 year Post and Mastercam veteran, When he's not amazing people with his abilities sitting behind a computer or CNC machine he's working on becoming a professional Hank Hill impersonator

**Russell Jennison**

When Russell isn't busy working out some crazy "mathamagics" he enjoys exploring the upper levels of the male Falsetto while writing and composing music.

**Shawn Cao**

Although he may seem quiet while working diligently to create new posts, this is not somebody that you want to race for pinks. Post writer by day, "Fast and the Furious" driver by night!

**Ivan Mikesic**

When he's not tickling the keyboard making post edits at an unheard of speed, you can find him playing anything with strings (we're thinking of testing that theory with a Kleenex box and some elastics!)

**Andre Lapointe**

The silent type, creating post magic during the day and helping everyone out, while enjoying nature and his family at night. Not to mention climbing his way to the top of many mountains on the weekend.

**Garek Cakmak**

The fact that he's been writing posts for more than 10 years isn't even his most impressive attribute, this guy can polish off multiple Montreal smoked meat sandwiches (If you've never tried them, it's worth the trip!) faster than most of us blink!
