

Mastercam Post Processor Services

Post Processors, *An integral part of your Mastercam System*

Most CAM systems look great in a demo environment, but you won't reach peak performance until the chips fly. Being a Mastercam reseller, we know how important the bond from Mastercam to your machine is. We have an entire team of Mechanical Engineers and Certified machinists solely focused on the development and improvement of Post Processors.

Our manufacturing experts are known worldwide for the quality of their service, as well as their ability to tackle the most complex programming applications.

Focused on partnering with OEMs and clients, our team will ensure the best quality product is delivered quickly. Put us to work, allow us to program your most complex machines edit-free.

Machine Configurations Supported:

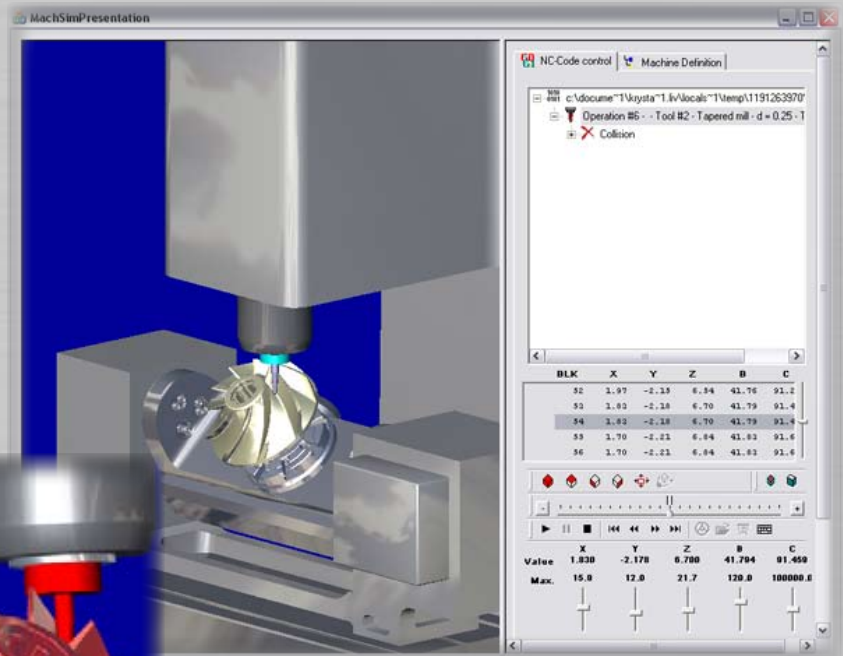

- Mill - 2-5 axis
- Lathe - 2-5 axis, upper & lower turrets, left right spindle, vertical, swiss etc
- Wire - 2-5 axis
- Router - 2-5 axis, aggregate support, multiple tables etc.
- Plasma/Waterjet/Torch - 2-5 axis

In-House Solutions for Machine Simulation

Virtual verification is becoming an increasingly essential aspect of the CAM process today.

Machine Simulation from Module Works integrated directly into your In-House posts will enable you to:

- Simulate your own machine
- Detect collisions and gouges
- Simulate stock removal
- Allow corrections prior to NC Code generation

We work closely with many machine tool distributors to ensure the quality of the turnkey solution delivered, making In-House Solutions' Post Processor Group your competitive advantage.

"Thanks for all of your help... you guys truly are the MC Post Jedi Masters!"

*Joshua G. Turner, Prototype Development Engineer
